

Managed Data Loss Prevention Service [MDLP]

Data Loss Prevention: Managed, Maximum Results

CBI's Managed DLP Service enables you to offload the creation of data policies and the monitoring of data incidents.

Our Cyber Threat Specialists are some of the most experienced, knowledgeable DLP experts in the world and they will help fine tune the operation of your DLP solution, delineating real data incidents from the many false positives that are generated. As each false positive is identified, the policy is further tuned to eliminate reoccurrences allowing only real data incidents to be escalated back to the business.

Continuous monitoring and management of data-in-motion based on user defined policy

Detection and alerting of critical incidents and rapid response

Fully managed DLP infrastructure

Policy creation & tuning

Policy enforcement (workflow of incident handling, alerts, escalation, remediation)

Ensuring OS patching is up-to-date and system health is monitored

Ensuring DLP software operates at the latest tested release

Enhanced and Executive Management Reporting

Business process analysis & Best Practice recommendations

Managed scans for data-at-rest policy violation

Regular tests of data breach actions and overall system health checks (war gaming)

Monitoring first-line incidents and escalating only those which are important

Policy fine-tuning on an on-going basis ensuring only relevant incidents are brought to your attention

Our Managed DLP Service team operates out of the CBI Security Operations Centre (SOC) providing responses required, based on the threat. They also provide verification that information governed by regulatory requirements is handled in the appropriate manner (PCI DSS, HIPAA). Ultimately, you will realize a lower TCO with reduced staffing requirements and reduced maintenance, infrastructure and training costs.
