

# Managed SIEM Service

We Monitor Your Environment So You Can Focus On What Matters

CBI Managed SIEM provides centralized visibility into your network to monitor, analyze, assess and respond to the network security threat landscape, providing the highest levels of data security by securing all your event data. Your team retains complete access to all event data and to the SIEM system, ensuring that you have continuous control over sensitive data.

Shifting the responsibility to our Cyber Threat Specialists lifts the burden of continuous security monitoring by your team allowing them to focus on what matters most. CBI's Managed SIEM Service enables your organization to retain your SIEM infrastructure onsite. This means that instead of sending data offsite, we monitor your environment through a secure VPN tunnel connection.

## Deployment and Onboarding

- Provide a Cyber Services Manager (CSM) to your organization to serve as your primary point of contact and escalation
- Develop and document a tailored governance process specific to your environment
- Establish repeatable processes that are unique to your environment so that when events occur, responses are consistent, predictable, meet your needs and requirements, and are compliant
- Apply standard correlation rules and reports based on CBI best practices, or create custom rules and reports based on your specific needs
- Baseline and adjust your SIEM platform for optimum performance and reduced false positives

## Management

Our engineers manage the daily maintenance operations for your SIEM infrastructure, as well as monitor the overall health of the device. This includes:

- Configuration management and tuning
- Performing necessary backups and upgrades
- Reporting, configuration and customization

## Monitoring

Cyber Threat Specialists provide unblinking monitoring and alerting of critical events from your SIEM infrastructure. The SIEM infrastructure and log data remain on-site at your organization, while we monitor remotely from our Security Operations Center. Your log data is never taken offsite.
